

2025 E-Commerce Sales Analysis

Sample Portfolio Project — Data analysis with Python (pandas, matplotlib)

Executive Summary

Total Revenue	399,111 TRY
Total Orders	952
Average Order Value	419 TRY
Average Customer Rating	3.94 / 5

Monthly Revenue Trend

The strongest month of the year was **2025-11** — driven by the November discount season and year-end holiday shopping. The dip seen in April-May points to a seasonal slowdown, suggesting campaigns should be planned around that period.

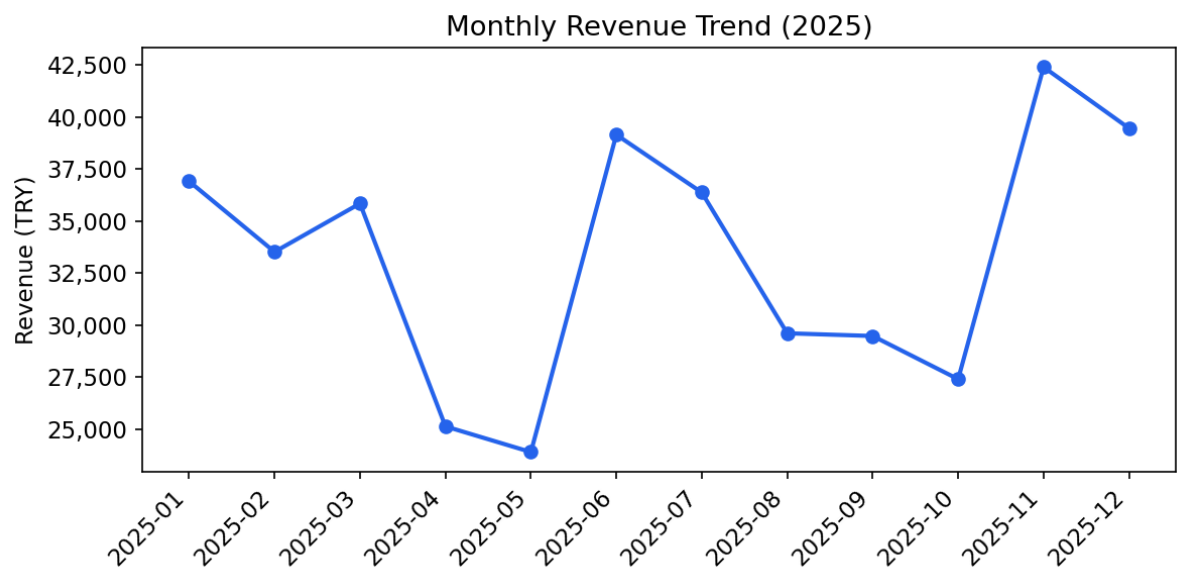

Figure 1: Total revenue by month (TRY)

Category & Product Performance

The **Electronics** category accounts for the largest share of total revenue. At the product level, **Wireless Earbuds** generated the highest revenue — a strong candidate for stock and campaign prioritization.

Region & Sales Channel Analysis

Marmara is the highest-performing region by revenue. On the channel side, orders placed via **Desktop** have the highest average order value — improvements to that channel's flow (e.g. checkout experience) could be prioritized. Roughly 24.5% of orders were purchased at a discount, which may be worth reviewing as part of the pricing strategy.
